Forward-Looking Statements

Statements contained in this presentation other than statements of historical fact are forward-looking statements. While these forward-looking statements, and any assumptions upon which they are based, are made in good faith and reflect our current judgment regarding the direction of our business, actual results will likely vary, sometimes materially, from any estimates, predictions, projections, assumptions or other future performance presented or suggested in this presentation. These forward-looking statements can generally be identified by the words "anticipates," "believes," "expects," "plans," "intends," "estimates," "forecasts," "budgets," "projects," "could," "should," "may" and similar expressions. These statements reflect our current views with regard to future events and are subject to various risks, uncertainties and assumptions.

We undertake no duty to update any forward-looking statement to conform the statement to actual results or changes in the company's expectations. For more information concerning factors that could cause actual results to differ from those expressed or forecasted, see NuStar Energy L.P.'s annual report on Form 10-K and quarterly reports on Form 10-Q, filed with the SEC and available on NuStar’s website at www.nustarenergy.com. We use financial measures in this presentation that are not calculated in accordance with U.S. generally accepted accounting principles ("non-GAAP"), and our reconciliations of non-GAAP financial measures to financial measures calculated in accordance with U.S. generally accepted principles ("GAAP") are located in the appendix to this presentation. These non-GAAP financial measures should not be considered an alternative to GAAP financial measures.
Solid Third Quarter 2023 Results Continue to Demonstrate the Strength and Resilience of Our Business

- **Our third quarter 2023 EBITDA** was **$180MM**, up compared to third quarter of 2022 EBITDA of $178 million
- **Our adjusted distribution coverage ratio** was **1.84x for the third quarter of 2023**

---

1 - Please see Appendix for reconciliations of non-GAAP financial measures to their most directly comparable GAAP measures
We redeemed the remaining one-third of Series D Preferred Units on September 12th, which represents an expedited timeline compared to our previously announced target of YE 2024.

- In mid-August, we issued 14.95 million common units for net proceeds of $222 million (including exercise of overallotment option) to complete our redemption of the Series D.
  - The equity offering is immediately accretive to cash flows through cost savings on distributions.
  - The offering is also slightly accretive to our leverage metric, and we continue to target a healthy debt-to-EBITDA ratio of below 4.0x by year-end 2023.
- Redeeming the remaining Series D eliminates an obligation senior to our common unitholders, simplifies our capital structure and increases our financial resilience and flexibility.
Due to Progress Made on Strengthening Our Balance Sheet, NuStar is on Target to Deliver Another Strong Year in 2023, and We Plan to Continue Maximizing FCF in 2024 and Beyond

**Generating Strong EBITDA**
- Expecting to generate Adjusted EBITDA of $720-740MM$ in 2023

**Redeemed Series D Preferred Units**
- Completed two-thirds redemption of the Series D in last 12 months
- Accelerated redemption of remaining one-third into 3Q 2023 by using the equity proceeds

**Targeting Healthy Debt-to-EBITDA Metric**
- Aiming to maintain at 4.0x or better

**Increasing Free Cash Flow**
- Working to position NuStar to return increasing value in the future

---

1 - Please see Appendix for reconciliations of non-GAAP financial measures to their most directly comparable GAAP measures.
In 2023, We Continue to Focus Our Strategic Capital Program on Our Core Asset Footprint

**Renewable Fuels**
- **Established:**
  - West Coast Network
  - Ethanol & bio-diesel blending
- **Developing:**
  - Ammonia System

**Refined Products**
- Midcontinent
- Colorado/NM/Texas
- Northern Mexico

**Crude Supply/Export**
- Permian Crude System
- Corpus Christi Crude System
- St. James Terminal

Total Estimated 2023 Strategic Spending: $120-130MM

- **Ammonia Pipeline** (~$25MM in 2023)
- **West Coast Renewable Fuels Storage** (~$25MM in 2023)
- **Permian Crude Pipeline System** ($35-45MM in 2023)
- **Additional Pipeline** (~$25MM in 2023)
- **Additional Storage** (~$5MM in 2023)
Carbon Emissions Reduction Goals Generate Growing Demand for NuStar’s Well-positioned Midstream Logistics, now and in the Foreseeable Future

- Regulatory priorities on the West Coast and in Canada continue to dramatically increase demand for renewable fuels in the region.
- At the same time, obtaining permits for greenfield projects is difficult, which increases the value of existing assets.
- Our West Coast terminals have the access and optionality to receive and distribute renewable fuels across the West Coast.

California’s Transportation Fuel Supply With Low-Carbon Fuel Standard Compliance From Petroleum Diesel Alternatives

Source: IHS Markit
We expect our renewable fuels EBITDA to increase in 2023, along with associated market share, as we complete additional projects presently in planning or under construction.

- We intend to continue converting tankage to renewable fuels as the market demands.
- Our facilities are positioned to benefit from new production and conversion projects for renewable diesel, sustainable aviation fuel (SAF), ethanol and other renewable fuels across the region.

NuStar’s Proportionate Share of California’s Renewable Fuels Market
(Total Volume for the Four Quarters Ended June 30, 2023¹)

- **3%** BIODIESEL
- **13%** ETHANOL
- **16%** RENEWABLE DIESEL
- **75%** SUSTAINABLE AVIATION FUEL

**Source:** California Air Resource Board (CARB)

¹ Most recent data available
Since establishing ourselves as an “early mover” in the renewable fuels logistics market on the West Coast over five years ago, we have developed an extensive renewable fuels logistics network to serve key global producers that spans across our West Coast footprint.

Our West Coast assets now generate **40-45%** of our storage segment revenues.

Renewable Fuels Projects completed-to-date and under construction:

**Portland**
- Convert 210,000 bbls to **renewable diesel**
- Convert 36,000 bbls to **biodiesel**

**Selby**
- Construct additional 400,000 bbls of **renewable diesel** storage
- Construct truck-loading for **renewable diesel**
- Multimodal shipment of **SAF**
- Convert 208,000 to **SAF**
- Modify rail to handle **renewable feedstock** offloading

**Stockton**
- Convert 30,000 bbls to **biodiesel**
- Convert 73,000 bbls to **renewable diesel** and expand **renewable diesel** handling to all 15 rail spots
- Convert 151,000 bbls to **renewable diesel**
- Connect to **ethanol** unit train offload facility

**Wilmington**
- Convert 160,000 bbls to **renewable diesel**
- Reconfigure dock for enhanced marine capability

---

*Includes biodiesel, ethanol, renewable diesel, renewable feedstock and SAF; 2023 estimated based on volumes through October 2023.*

---

**NuStar’s West Coast Terminals Renewable Fuel Growth**

**Renewable Fuels**

... And We Continue to Partner With Key Customers to Develop Our Renewable Fuels Network, as LCFS Mandates Expand to Additional Markets
Ammonia is the basic building block for all types of nitrogen fertilizer which is an essential nutrient for growing plants
- About 80% of the 200 million tons of ammonia produced each year is used for fertilizer
- About 50% of the world’s food production depends on ammonia

Ammonia is also used to make urea, a critical component of Diesel Exhaust Fluid (“DEF”)
- DEF converts the nitrous oxide (NOx) emitted by diesel engines into water and nitrogen
- Virtually all diesel engines, from those powering light-duty vehicles to heavy-duty trucks to industrial machinery, require DEF to comply with tightening emissions standards in the U.S., and also in nations around the world
- Global DEF demand is expected to continue to grow by an expected ~20% from 2023 to 2026

Sources: Science Magazine, IHS Markit, Argus, Research & Markets Global Ammonia Report

50% of World’s Food Production Depends on NH₃

50% of World’s Food Production Depends on NH₃

Global Demand for DEF Expected to Grow From 2023 to 2026 by ~20%
Ammonia, the World’s Second-most Widely Used Chemical, Offers Significant “Greening” Opportunities

**Gray Ammonia**
- Derived from natural gas, nearly all of the world’s production made utilizing the Haber-Bosch process

**Blue Ammonia**
- Gray Ammonia for which by-product CO₂ has been captured and stored, reducing climate impact

**Green Ammonia**
- Produced with hydrogen from water electrolysis powered by renewable energy

- Traditional fossil-fuel ammonia production is estimated to contribute about 1.0% of global CO₂ emissions, which has driven interest in its de-carbonization
  - “Blue” ammonia is produced with natural gas, but the associated emissions are captured and stored
  - “Green” ammonia is produced using “renewable” electricity to power an electrolyser to extract hydrogen from water and an air separation unit to extract nitrogen from air, which are then combined through a chemical reaction powered by renewable electricity, to produce ammonia

- In addition, “blue” and “green” ammonia have potential for use as lower-carbon alternative fuels: for engines/turbines to generate electricity, in alkaline fuel cells, as an up-to-70% blend ICE vehicles and for the maritime industry

- Ammonia can also be a lower-cost option for transporting hydrogen, which can be used for fuel cells or other applications. Ammonia is easier to transport and store than hydrogen, as it doesn’t require cryogenic or high-pressure storage, and can be relatively easily cracked to convert it to hydrogen

Sources: Science Magazine, IHS Markit, Argus, Research & Markets Global Ammonia Report
Our Ammonia System spans approximately 2,000 miles from Louisiana north along the Mississippi River to Missouri, and then Northwest and East, to Nebraska and Indiana.

- Today, we provide the lowest-cost option for transporting both imported and domestically produced ammonia to fertilize crops in our nation’s “breadbasket”

We have capacity available to transport additional volumes, including “blue” or “green” ammonia.

- Currently running ~30 MBPD (~3,500 STPD¹), but have operating capacity close to ~50 MBPD (~5,500 STPD)
- Our Ammonia System currently represents 5-10% of our pipeline segment revenues

We expect the system’s utilization, and its revenue contribution, to see strong growth starting in early 2024.

- We have near-term opportunities for low capex projects that we expect to meaningfully increase our system utilization, and we are discussing larger, longer-term ammonia opportunities for our system, as well as for our St. James facility

¹ – short tons per day
We have partnered with OCI Global (OCI) to build a new 14-mile pipeline segment that will connect OCI’s facility in Wever, IA to our existing ammonia pipeline.

- OCI's facility uses ammonia to make fertilizer and to meet growing demand for DEF (Diesel Exhaust Fluid)

We have agreed to provide transportation services under a long-term contract.

- Healthy-return, low-capital project will increase utilization
- Expected completion in January 2024

OCI has committed $30 million in capital expenditures for new ammonia cooling and storage infrastructure at their Wever facility and is expected to bring an additional 1.1 million tons of blue ammonia capacity online in 2025 from the Gulf Coast.
Gasoline demand was steady in the United States throughout 2023 and is on track for modest growth in 2024.

Diesel demand has continued its strong performance in 2023 and is expected to remain at or exceed Pre-COVID levels in 2024.

Source: ESAI
NuStar’s Refined Products Systems Serve Key Markets Across the Midcontinent and Texas...

**Midcontinent Systems**

- **CENTRAL EAST:** A 2,500-mile pipeline system with multiple delivery options
  
  - **East Pipeline** – This system serves important markets across the Midwest/West, with flexible refined product supply from refineries in McPherson, Kansas, El Dorado, Kansas and Ponca City, Oklahoma
  
  - **North Pipeline** – System flows from North Dakota to the Twin Cities, serving both rural markets and large cities with refined product supply from Mandan, North Dakota refinery

- **CENTRAL WEST:** Approximately 2,000 miles of structurally exclusive pipeline, supplied from the McKee, Texas refinery serving markets in Texas and nearby states

**South Texas Systems**

- Around 700 miles, a majority of which are structurally exclusive pipeline, supplied from refineries located in Corpus Christi and Three Rivers, Texas serving markets in Texas and northern Mexico
... And Our Markets Have Proven Resilient (and We Expect to Continue to See Strong, Consistent Demand)

Total Refined Products

Percentage of Pre-COVID Demand

- Our resilient asset base recovered quickly from April 2020's pandemic low
- Third quarter 2023 refined product throughputs were 104% of pre-COVID levels

1 – Comparison versus 2019 demand; applicable periods adjusted for Northern Mexico projects for a comparable presentation; includes on-road product demand in our storage system; 2 – Comparison versus 2020 demand; applicable periods adjusted for Northern Mexico projects; includes on-road product demand in our storage system
Refinery Utilization has Risen Steadily Since the Pandemic Through 2023

Global Refinery Utilization (2019-2023)

- **2019 Avg**: 87%
- **2020 Low**: 78%
- **2021 Avg**: 83%
- **2022 Avg**: 85%
- **2023E Avg**: 86%
- **2024E Avg**: 85%

**Global refinery utilization has been rising steadily since the pandemic, with the U.S. (90%), Asia (90%), and Europe (93%) gaining ground, while Russia (70%) and the Middle East (82%) continue to lag.**

**U.S. refinary utilization is currently expected to be at 93% in 2023, up 2% over the over 2022 average.**

Source: ESAI
Because of its superior geology and low breakeven costs, the Permian Basin’s production:

- Exited 2022 at 5.7 MMBPD, representing approximately 45% of the nation’s total output
- Is projected to exit 2023 at 5.9 MMBPD, representing 3% growth compared to 2022 exit

We have been pleased with our system’s performance since we acquired it in 2017, and we expect our system to continue to generate strong results in 2023 and in the years ahead.
Our “Core of the Core” Location has Attracted Active Top-tier Customers Whose Activity is Supporting Steady Growth

- The quality of geological formations underlying our system has attracted top-tier customers
  - ~69% of our system’s revenue is generated from investment-grade (IG) rated and Non-IG BB-rated entities

- We averaged 523 MBPD in 3Q23, more than 15 Mbd higher than 2Q23, and averaged 533 MBPD in October
  - We expect the rest of 2023 to continue to rebound, backed by capital projects already in progress
  - And expect to average ~540 MBPD in 4Q23

- As volumes flex, we also expect to flex our capital expenditures and project 2023 spending to be in the range of $35 – 45MM

Corpus Christi has remained the dominant Gulf Coast crude exports hub since 2020
- In 2023, 59% of the U.S. Gulf Coast’s total export volumes left via Corpus Christi-based terminals

U.S. Gulf Coast crude exports are projected to continue at record volumes due to the global oil demand forecasted over the upcoming years

Improved global refined product demand should continue to lead the way to further recovery in global crude demand

Source: RBN Energy, ESAI

*Comprised of gasoline and diesel demand
Our Corpus Christi Crude System (CCCS) is comprised of our 16" South Texas Crude Oil Pipeline System, our 12" Three Rivers Supply Pipeline, our 30" pipeline from Taft and our North Beach Export Terminal, which also receives volumes from Harvest’s 16" Pipeline and delivers to local refineries.

In July 2022, we extended our MVC contract with Trafigura for an additional year and a half, through December 2024.

- **In-bound Capacity**
  - TOTAL: 1.2MMBPD
    - South Texas Crude System 16" Pipeline - 240MBPD
    - Taft 30"- 720MBPD and expandable
    - Harvest 16" Pipeline - 240MBPD

- **Storage Capacity**
  - TOTAL: 3.9MMbbl
    - Potential expansion 0.4MMbbl

- **Outbound Capacity**
  - TOTAL: 1.2MMBPD
    - Export Docks- 750MBPD to 1.0MMBPD
    - Refinery Supply- 220MBPD

Unlike most other midstream operators in the Port of Corpus Christi, NuStar provides optionality for marine exports and extensive connectivity to local refineries.

U.S. shale production growth and improving global demand are expected to drive the recovery and growth in our CCCS volumes.
In 2023, We Will Continue to Focus on NuStar’s Strategic Priorities That We Set Back in 2022

Our Strategic Priorities:

1. Maximizing Our Cash Flow
2. Maintaining a Healthy Debt Metric
3. Providing Safe & Reliable Transportation & Storage of Essential Energy
NuStar By-the-numbers

Storage Segment Contracted Revenues  
(% 2023 Forecast – as of 3Q23)

- Take-or-pay Contracts: 69%  
- Other: 31%

~95% of revenues are tied to PPI-FG\(^2\)

Most storage revenues are tied to regional CPI.

NuStar Investment-grade Customers  
(% Pipeline/Storage 2023 YTD Revenues as of September 30, 2023)

- Investment-grade: 67%  
- Large Private or International (Not rated): 13%  
- Other: 20%

1 - Committed through take or pay contracts or through structural exclusivity (uncommitted lines serving refinery customers with no competition); 2 - Most crude pipelines have rates that are subject to floors and caps, which is common in the industry.
In the past few years, we utilized cash flows, proceeds from asset sales and monetization of our corporate real estate to continue to reduce debt balances, which enabled us to repurchase about 2/3 of the Series D preferred units through July 2023.

And on September 12th, we redeemed the remaining 1/3 of the Series D preferred units with proceeds of ~$222 from the ~15 million units of equity we issued in August 2023.

- Thus, strengthening our balance sheet and simplifying our capital structure.

In June 2023, we also extended the term of our $1.0 billion revolver through January 2027 and our receivables financing agreement through July 2026.

\(^1\) Please see Appendix for reconciliations of non-GAAP financial measures to their most directly comparable GAAP measures
Reconciliation of Non-GAAP Financial Information

NuStar Energy L.P. (the Partnership) utilizes financial measures, such as earnings before interest, taxes, depreciation and amortization (EBITDA), distributable cash flow (DCF) and distribution coverage ratio, which are not defined in U.S. generally accepted accounting principles (GAAP). Management believes these financial measures provide useful information to investors and other external users of our financial information because (i) they provide additional information about the operating performance of the Partnership’s assets and the cash the business is generating, (ii) investors and other external users of our financial statements benefit from having access to the same financial measures being utilized by management and our board of directors when making financial, operational, compensation and planning decisions and (iii) they highlight the impact of significant transactions. We present segment EBITDA to facilitate period-over-period comparisons of the operational performance of our business segments and to understand our business segments’ relative contributions to our consolidated performance. We may also adjust these measures to enhance the comparability of our performance across periods.

Our board of directors and management use EBITDA and/or DCF when assessing the following (i) the performance of our assets, (ii) the viability of potential projects, (iii) our ability to fund distributions, (iv) our ability to fund capital expenditures and (v) our ability to service debt. In addition, our board of directors uses EBITDA, DCF and a distribution coverage ratio, which is calculated based on DCF, as some of the factors in its compensation determinations. DCF is a financial indicator used by the master limited partnership (MLP) investment community to compare partnership performance. DCF is used by the MLP investment community, in part, because the value of a partnership unit is partially based on its yield, and its yield is based on the cash distributions a partnership can pay its unitholders.

None of these financial measures are presented as an alternative to net income. They should not be considered in isolation or as substitutes for a measure of performance prepared in accordance with GAAP.

The following is a reconciliation of operating income to segment EBITDA for our pipeline segment (in thousands of dollars).
